

LEARNING WITH FUN

Learning can be fun. A "fun" style of learning is a great way to introduce new subjects and new material to students. That type of atmosphere is a great way to reel in students, even the apprehensive or uninterested ones. However, learning shouldn't be and can't always be fun. The lower levels of Elementary school, students learn skills like reading, writing and basic mathematics which are essential developmental skills. At that age, children have not yet developed the ability to recognize the future and how or why something is important for their future. They are drawn towards what they get pleasure out of. For these students, learning should be and can be fun. "Fun" learning will draw students towards the essential skills that they are learning and gets them involved. Additionally, for the average student, these skills are developed naturally with little effort when they are exposed to them.

“What we learn with pleasure we never forget .” – Alfred Mercier
